(54) Title: RADIOLOGY DEVICE COMPRISING IMPROVED IMAGE ENLARGING MEANS

(54) Titre: DISPOSITIF DE RADIOLOGIE COMPORTANT DES MOYENS D'AGRANDISSEMENT D'IMAGES PERFECTIONNEES

(57) Abstract: The invention concerns a radiology device comprising an X-ray source (11) for exposing a subject (S) to the radiation of said source, means (12) converting the X-rays into optical images for forming primary optical images, means (20) for transforming the primary optical images into secondary optical images, and means (40) for displaying the secondary images to a user. The invention is characterised in that the means forming secondary images comprise an optical chain including a succession, from the converter output towards the device output, an image enlarging assembly (22) directly exposed to the primary images of said converting means (12), an assembly (23) for optical intensification of the enlarged images and a photosensitive matrix sensor (25) for forming said secondary images.
